Product(s): The ThreatX Platform

Overall Comment: "ThreatX provided value starting on the first day. Their unique ability to identify threat actors by signature, and their 24-hour managed SOC were key differentiators (we paid for a tool, but we got weekend and evening coverage included at no additional cost). If you are looking for a WAF that doesn't require a lot of maintenance or engineering talent, start here."

○○○○○ Evaluation & Contracting

Lessons Learned

What do you like most about the product or service?

Four things make ThreatX's "WAAF-as-a-service" unique when compared to other WAF vendors: (1) You pay for a WAF product at a reasonable price, but you also get a 24-hour managed SOC tuning your rules and taking proactive steps to mitigate risks, for no additional charge. (2) Their product is completely vendor agnostic. You can provide WAF and API protection for any web application, whether it is hosted in AWS, Azure, GCP, or on-premises. (3) ThreatX's unique approach to identifying and blocking known threat actors makes them incredibly effective as soon as they are plugged into your system; without creating any custom rules, you are already protected by their default threat blocking. (4) ThreatX uses cutting-edge defensive techniques like tarpitting to discourage resource abuse while allowing regular and appropriate use.

What do you dislike most about the product or service?

Our DevOps team disliked the fact that most of the detection and blocking rules were invisible to them. If your operations teams are very "hands-on" in managing granular WAF blocking rules, this might not be the best product.
